

Maximum data security!

Regardless of whether at home or at work: The safety of your digital data is often overlooked these days, on the basis that „nothing ever happens to me“. Unfortunately, it can and often does! O&O DiskImage lets you create images of your entire computer or individual partitions while you work. With the new version 7, it is now possible for the first time to create a Windows Boot CD directly from within O&O DiskImage itself. No need for long, painstaking downloads and procedures. In addition, O&O DiskImage 7 is also now fully compatible with the soon-to-be-released Windows 8, as well of course as Windows 7 and Windows XP.

Image entire PCs, individual drives or files

The most reliable way to protect yourself against data loss is if you make regular backups of your data and the operating system and store it on an external storage medium. When backing up your PC, O&O DiskImage saves both personal files as well as drive information and individual settings. This not only protects irreplaceable files, such as family photos, vacation videos and office documents, but you also save yourself in the event of a crash the lengthy set up and reinstall of all the programs and the Windows operating system.

Regular images are a must

To make sure your backups are always up to date, we recommend that you perform regular backups at short intervals. You can automate this with O&O DiskImage, so that your data is backed up say once a week, for example, automatically and in the background.

Quick and easy restoration

If you have backed up individual drives, you can easily restore them over the user interface of O&O DiskImage under Windows. To restore an entire PC or the system partition you can run O&O DiskImage without installation directly from the boot media.

Machine independent restoration

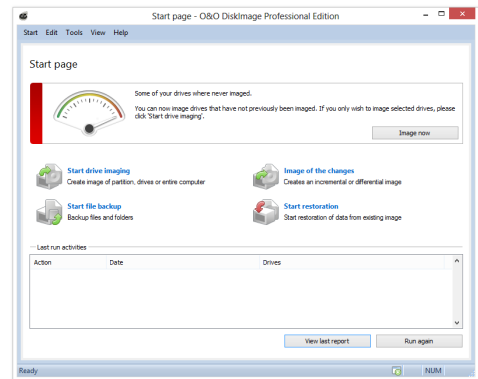

The M.I.R. (Machine Independent Restoration) feature allows you to also restore or duplicate an entire PC or system partition on a computer whose hardware is different from the original machine, for instance, where you have changed hardware components on the target machine, or have bought a brand new PC and want to restore an old image onto it.

Restore files and folders

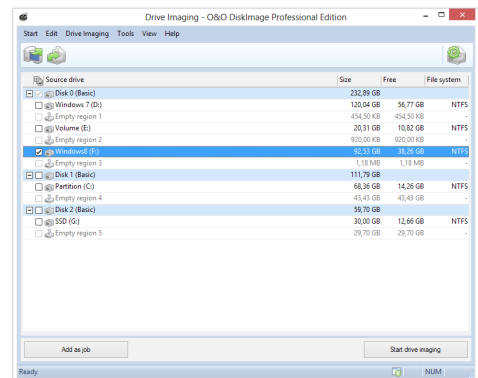

For restoring file backups, that only include files and folders, you can use most popular compression tools such as WinZIP - entirely independent from the O&O DiskImage program.

System Requirements

Windows® 8, 7, Vista® and XP (all Editions)

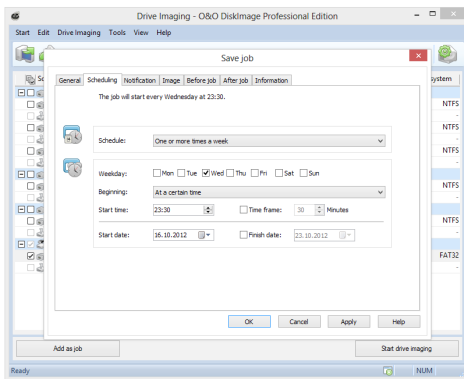

Startpage: O&O DiskImage, Controllcenter

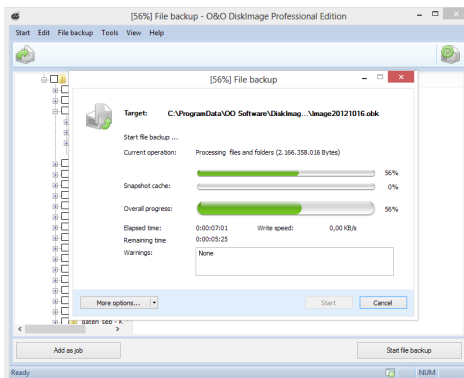

Select drive for imaging

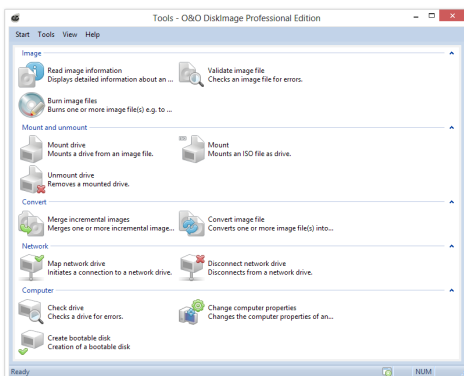

File Backup

Job assistant with schedule

Imaging prozess (empty snapshot cache)

Tools

Imaging Features

- ✦ Image an entire computer with the push of a button
- ✦ Image system and data drives
- ✦ Clone drives and entire disks
- ✦ File backup: image and restore individual files and/or folders
- ✦ Monitoring and warning of security risks
- ✦ Image only used sectors
- ✦ Incremental/differential images: backup only the changes
- ✦ Forensic and Direct Forensic images
- ✦ Save images to network drives
- ✦ Time Schedule for automatic, regular images
- ✦ Advanced burning on CD/DVD/Blu-ray

Restoration Features

- ✦ **NEW** Now supports EFI/UEFI systems as well as BIOS
- ✦ Easily restore files, folders, drives and disks
- ✦ Restoring onto different hardware (M.I.R.)
- ✦ Boot media is based on Windows 7
- ✦ Boot media contains extra system rescue tools
- ✦ Direct restoration from virtual disks (VHD)

Tools

- ✦ **NEW** Create a boot CD from the program itself
- ✦ **NEW** Even simpler and quicker user interface
- ✦ High-performance compression and encryption of images
- ✦ Support for dynamic and GPT volumes
- ✦ Exclude certain files and/or file types
- ✦ Mount ISO file as a drive
- ✦ Check drives and images for errors
- ✦ Works with Microsoft Virtual PC Disks (VHD)
- ✦ Advanced report management and e-mail notifications
- ✦ Live Update: Automatic Updates to current Program Versions
