

Migration Kit for Windows 7

The quickest way to the new Windows

No technical upgrade from Windows XP to Windows 7 possible

Microsoft will not be offering any technical possibility to upgrade from a Windows XP installation to Windows 7. What there will be is only a licensing option, meaning that a Windows XP user is entitled to upgrade to Windows 7. He or she, however, will not be able to transfer settings, applications, or (with Clean Install) data.

The solution: Migration Kit for Windows 7

Migration Kit for Windows 7 is the result of a collaboration between O&O Software GmbH and Laplink Software Inc. The main components of Migration Kit for Windows 7 are O&O DiskImage 4 Professional Edition and Laplink PCmover. O&O DiskImage provides for an imaging of all data prior to the migration as well as for periodic imaging of the new system. Laplink PCmover has the job of moving applications, games, settings, and data to Windows 7.

Everything for the migration

Migration Kit for Windows 7 contains everything that's needed to make migration as easy as possible. The clearly designed wizard guides you step by step through the migration process from Windows XP/Vista to Windows 7. O&O DiskImage 4 Professional Edition and Laplink PCmover are able to image and migrate up to three systems. The migrations can occur on the same as well as between two different computers. An Ethernet transfer cable is included in delivery for migration between two computers.

Steps in operating system migration (migration steps)

A migration to a new operating system occurs in a series of steps: data, settings, and applications/games migration. If you're only interested in taking personal data (e.g., office documents, photos, videos, etc), this can be done using imaging programs such as O&O DiskImage. The migration of settings from the old operating system using Easy Transfer, a component of Microsoft Windows, can be accomplished to only a limited extent. A complete transfer of user accounts and personal settings is only possible with the Migration Kit for Windows 7. Laplink Pcmover, the program contained in the Kit, carries out the last phase of migration: migration of all applications and games*.

Migration on the same or between two different computers

Migration Kit for Windows 7 was designed for a user wishing to install the new Windows 7 on his or her old computer. It is also intended for someone purchasing a new computer where Windows 7 is already installed, and who wants to transfer data, applications, and settings onto it from the older model. The Migration Kit for Windows 7 supports all variations of a migration within one or between two systems, and of course, the migration from Windows 2000, Windows XP, Windows Vista and Windows 7 Beta/RC to the final version of Windows 7. The migration from 32 to 64-bit systems is also possible using the Kit.

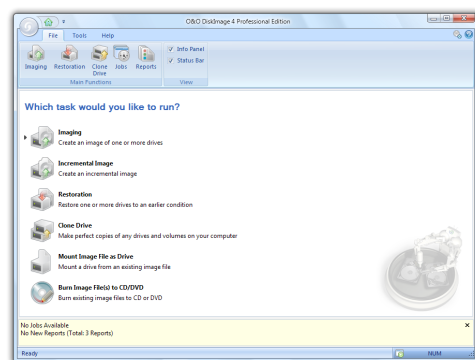

* For technical reasons, the migration of security products (Antivirus, Firewall etc.) is not possible. These products must be reinstalled once the migration to Windows 7 has been completed.

Important Features at a Glance

- Migration of personal data
- Migration of all personal settings
- Migration of applications and games
- Migration from Windows 2000 Pro to Windows 7 (32-bit/64-bit)
- Migration from Windows XP to Windows 7 (32-bit/64-bit)
- Migration from Windows Vista to Windows 7 (32-bit/64-bit)
- Migration from Windows 7 Beta/RC to Windows 7
- Complete data imaging of the old and new systems
- Up to three migrations on one or between two systems
- Migration on the same or between two systems

System Requirements

Old System:

- Windows 2000 Pro, Windows XP, Windows Vista or Windows 7 Beta/RC
- Minimum requirement of the respective operating system
- 512 MB RAM (for using the Boot CD)
- 100 MB free hard disk space for the program installation

New System:

- Windows 7 (all Editions)
- Minimum requirements for Windows 7
- 512 MB RAM (for using the Boot CD)
- 100 MB free hard disk space for the program installation
