

O&O Defrag 32

Professional Edition

O&O Defrag – More Performance, More Clarity, More Control

With O&O Defrag, you can reliably optimize hard drives and SSDs and ensure fast access times and efficient use of your drives. The new version combines proven optimization technologies with a completely modernized user interface and new features for drive health, cleanup, and task management.

New, yet familiar

The interface has been completely modernized and redesigned in a clean Windows 11 style. At the same time, you remain in control: work with the streamlined Modern UI or switch to the Classic UI at any time for extensive configuration options aimed at experienced users. This makes O&O Defrag equally suitable for quick everyday use and detailed individual configuration.

Less clutter, more free space

The new O&O DiskCleaner removes temporary and unnecessary files more conveniently than ever. Additional categories provide a clearer overview, and multiple drives can now be cleaned up at the same time. This helps free up valuable storage space and reduce unnecessary data on your system.

Drive health at a glance

With the new Drive Health feature, you can see the condition of your SSDs, HDDs, and NVMe drives directly in O&O Defrag. Clear ratings help you identify potential issues early and assess the condition of your storage devices more easily.

Optimization that thinks ahead

Optimization tasks are now even easier to schedule, customize, and manage. Multiple drives can be analyzed at the same time, optimization methods are easier to select, and clear reports show which actions have already been completed. Automatic optimization works in the background and adapts to the current system load.

O&O VisualDisk – Understand write activity

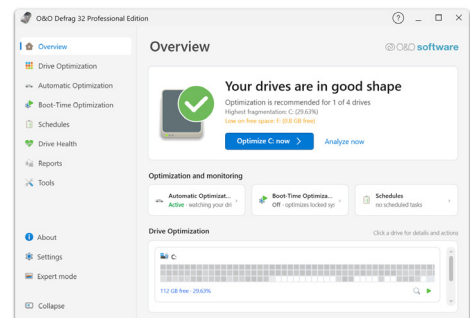

With O&O VisualDisk, you gain a clear view of write activity on HDDs, SSDs, and NVMe drives. This allows you to see how optimization can reduce future write operations and help use your drives more efficiently while avoiding unnecessary wear.

O&O StartupManager – Start faster

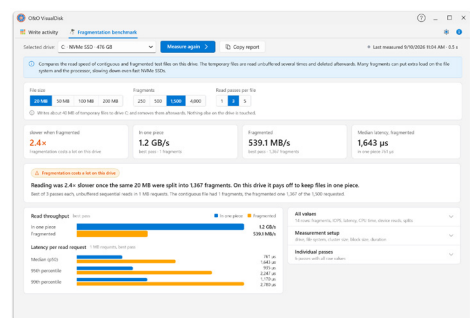

The integrated O&O StartupManager clearly shows which programs, services, and tasks are launched automatically when Windows starts. Information about their impact on startup time helps you identify and disable unnecessary startup entries. This can shorten Windows startup times and get your PC ready for use faster.

Optimized for HDD, SSD, and NVMe

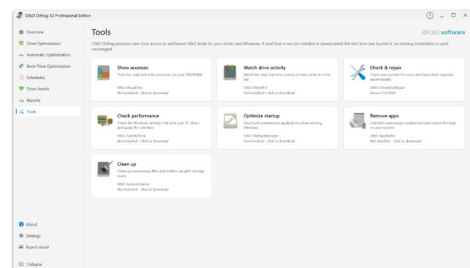

O&O Defrag detects the type of drive in use and applies the appropriate optimization strategy. For SSDs, specially developed methods such as SOLID/Quick and SOLID/Complete are available, along with optimization using TRIM. Traditional hard drives benefit from proven defragmentation methods that reorganize files efficiently and reduce fragmentation.

O&O DiskCleaner

Highlights

- ▀ New Modern UI in Windows 11 style
 - ▀ Switch between Modern UI and Classic UI
 - ▀ Drive Health for SSDs, HDDs, and NVMe drives
 - ▀ New and improved O&O DiskCleaner
 - ▀ Clean up multiple drives simultaneously
 - ▀ Improved scheduling and management of optimization tasks
 - ▀ Analyze multiple drives at the same time
 - ▀ Clear reports on completed optimization tasks
 - ▀ O&O VisualDisk
 - ▀ O&O StartupManager
 - ▀ O&O AppBuster
 - ▀ Native ARM64 support
 - ▀ SSD optimization with SOLID/Quick and SOLID/Complete
 - ▀ SSD optimization using TRIM
 - ▀ Defragmentation and optimization of traditional hard drives
 - ▀ O&O IntensiveOptimize with BitLocker support
 - ▀ Check&Repair for system checking and repair
 - ▀ Check Windows for inconsistencies
 - ▀ Automatic background optimization
 - ▀ Adaptation to system load with O&O ActivityMonitor
 - ▀ Defragmentation of locked files
 - ▀ Thin Provisioning support
 - ▀ Windows Compact OS support
 - ▀ Optimization of USB flash drives and memory cards
 - ▀ Power Management for notebooks
 - ▀ Suitable for beginners and advanced users
 - ▀ Support for Windows 11 and Windows 10 (64-bit)
- ▀ Supports Windows® 11 and 10 (64-bit)

Made in Germany. Made in Berlin.

O&O Software develops and maintains its products in Berlin. For more than 25 years, our solutions have stood for reliable Windows technologies, high security standards, and professional tools for both private and business users.
