O&O DiskImage 10
Professional Edition

Maximum data security!

Important Features at a Glance
Backing up data on a regular basis is still something that many users prefer to avoid. At least that is until they suffer their first loss of important data as a result of software, hardware or user error: that's when it becomes crystal clear just how valuable a reliable and up-to-date backup really is. O&O DiskImage supports Windows Vista, 7, 8, 8.1 and 10.

Image entire PCs, individual drives or files
The most reliable way to protect yourself against data loss is if you make regular backups of your data and the operating system and store it on an external storage medium. When backing up your PC, O&O DiskImage saves both personal files as well as drive information and individual settings. This not only protects irreplaceable files, such as family photos, vacation videos and office documents, but you also save yourself in the event of a crash the lengthy set up and reinstall of all the programs and the Windows operating system.

Regular images are a must
To make sure your backups are always up to date, we recommend that you perform regular backups at short intervals. You can automate this with O&O DiskImage, so that your data is backed up say once a week, for example, automatically and in the background.

Quick and easy restoration
If you have backed up individual drives, you can easily restore them over the user interface of O&O DiskImage under Windows. To restore an entire PC or the system partition you can run O&O DiskImage without installation directly from the boot media.

### Machine independent restoration
The M.I.R. (Machine Independent Restoration) feature allows you to also restore or duplicate an entire PC or system partition on a computer whose hardware is different from the original machine, for instance, where you have changed hardware components on the target machine, or have bought a brand new PC and want to restore an old image onto it.
Restore files and folders
For restoring file backups, that only include files and folders, you can use most popular compression tools such as WinZIP - entirely independent from the O&O DiskImage program.
Plug-and-play function
Thanks to the integrated plug-and -play option, selected files and folders can be backed up automatically as soon as, for example, an external hard disk is connected to the computer. This is ideal for users who forget to carry out regular backups or who don't want to go through the trouble. Once configured, the auto backup function runs by itself.

Tools

Features

- New File-based backup: image files up to 5 times quicker
- Fully compatible with the new Windows 10
- Trigger multiple tasks with portable devices (plug and play)
- Driver integration when creating a boot medium
- Driver integration when using a boot medium
- Direct creation of VHDs
- Simplified wizard for creating and modifying jobs
- Creating jobs with the Windows Task Scheduler
- Image an entire computer with the push of a button
- Image system and data drives
- Clone drives and entire disks
- Monitoring and warning of security risks
- Image only used sectors
- Incremental/differential images: backup only the changes
- Save images to network drives
- Time Schedule for automatic, regular images
- Advanced burning on CD/DVD/Blu-ray
- Supports EFI/UEFI systems as well as BIOS
- Easily restore files, folders, drives and disks
- Restoring onto different hardware (M.I.R.)
- Boot media contains extra system rescue tools
- Direct restoration from virtual disks (VHD)
- Start a job by connecting a device
- Create a boot CD from the program itself
- Even simpler and quicker user interface
- High-performance compression and encryption of images
- Support for dynamic and GPT volumes
- Exclude certain files and/or file types
- Check drives and images for errors
- Advanced report management and e-mail notifications
- Live Update: Automatic Updates to current Program Versions

Made in Germany. Made in Berlin.
