

O&O DiskImage 23

Premium Edition

Simple. Automatic. Secure.

O&O DiskImage 23 Premium reliably protects your valuable data against loss caused by ransomware, hardware failures, or system crashes. Back up your entire computer, individual drives, or important files – now even more easily with automated backups and additional cloud backup. In an emergency, restore your data or your entire system in just a few clicks, even if Windows no longer starts.

**Maximum security
with minimal effort**

**Automatic backup
of your systems & files**

**Recovery possible
even without Windows**

Your Benefits at a Glance

NEW – Guided User Interface

Everything at a glance: The completely redesigned interface provides a clear, centralized overview of your backup history, protection status, and important recommendations. Instantly see how well your data is protected.

NEW – Additional Cloud Backup

Double protection: Create your backups locally and automatically transfer them to an additional cloud storage location, such as S3-compatible storage. Transfers run conveniently in the background.

NEW – Automatic Backup Chains

Set it up once, stay protected: Define your preferred backup intervals. O&O DiskImage then automatically creates your backups, ensuring continuous data protection without manual effort.

Ideal for:

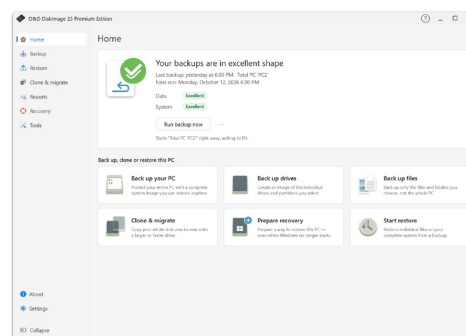

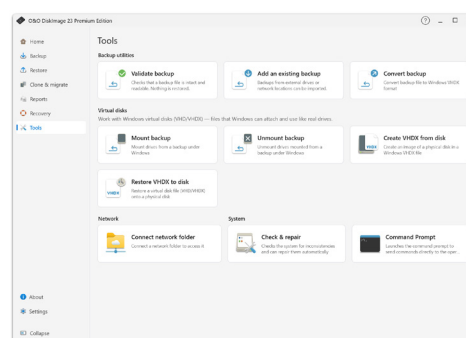

- Home office and remote work
- IT administrators and power users
- Anyone who wants to protect their valuable data

Create Bootable Recovery Media – Be Prepared for Emergencies

Create bootable recovery media on a USB drive in just a few clicks. This allows you to start your computer independently of Windows and restore your backups – even after a system crash or hardware failure. Additional drivers can be integrated when needed to support new hardware.

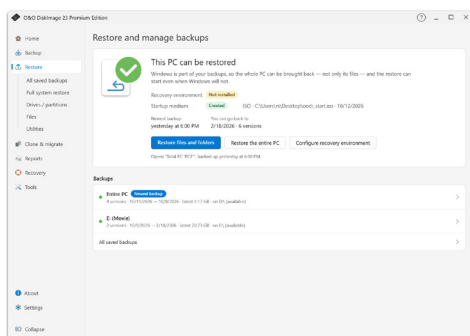

Fortress Mode – Maximum Security

The exclusive Fortress Mode enables backup and recovery in a protected, isolated Windows environment. Once integrated into the Windows Recovery Environment, O&O DiskImage can be launched directly on your PC – even if Windows no longer starts. Alternatively, external bootable media can be used. This ensures you remain in control, even in an emergency.

O&O DiskImage 23

Premium Edition

Backup & Recovery

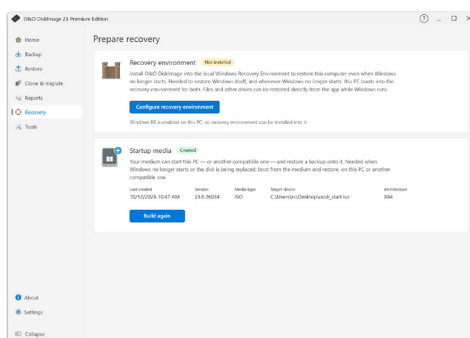

- ♥ Back up your entire computer or individual drives
- ♥ File-based backups for targeted data protection
- ♥ Restore your entire system or individual files
- ♥ Clone entire drives (1:1 copies)
- ♥ Mount backup images as drives
- ♥ Restore your system to new hardware

O&O DiskImage RecoveryPartition

- ♥ Integrated recovery environment
- ♥ Available directly at system startup – no separate media required
- ♥ Access backups even if Windows no longer starts
- ♥ Integration via BuildPE within the software
- ♥ Protected environment with the exclusive Fortress Mode

VHD / VHDX Support

- ♥ Create, merge, and mount virtual drives
- ♥ Incremental and differential backups of virtual drives
- ♥ Convert backups to VHDX format
- ♥ Flexible use for virtualization and system migration

Convenience & Automation

- ♥ NEW: Guided User Interface with centralized protection status and backup history
- ♥ NEW: Automatic Backup Chains with customizable intervals
- ♥ NEW: Additional Cloud Backup with support for S3-compatible storage
- ♥ Scheduled backups and automated backup routines
- ♥ Wizards for backup setup and recovery
- ♥ Automatic backup start when specified storage devices are connected
- ♥ Automatic retention policies (Smart Retention)
- ♥ Advanced reporting and error logs
- ♥ Command-line control

Technical Highlights

- ♥ Support for NTFS, FAT32, and FAT
- ♥ Compatible with modern UEFI/EFI systems
- ♥ Custom driver integration for recovery media
- ♥ Create bootable USB recovery media directly from the application
- ♥ Support for SSDs, HDDs, and NVMe drives
- ♥ Hardware-independent recovery

Why a System Image Is Essential

A system image protects more than just individual files: it preserves the complete state of your system – including Windows, applications, settings, and personal data. After a cyberattack, hardware failure, or failed update, you can restore your computer to its previously backed-up state. No time-consuming reinstallation or reconfiguration required.

System Requirements

- ♥ Windows 10 or Windows 11 (64-bit)
- ♥ Internet connection required for product activation
- ♥ Additional storage space required for backups and recovery media
