

O&O FileBackup

O&O FileBackup. Instant. Reliable. Fast.

O&O FileBackup is the simplest and most convenient way to back up your data. Use the automatic detection of important files for backup or select the directories containing important data yourself. Once set up, all you need to do in the future is to start the backup and automatically add all new and changed files to existing backups.

Automatic recognition of important files

O&O FileBackup can automatically detect important files and suggest them for backup. Select photos, videos, music and office documents and all the files with the corresponding file extensions are searched for and saved. If you want, you can even customize it yourself and include more files in this backup.

Would you prefer to select directories or entire partitions yourself? No problem. And so that only the really important files are backed up, system and program files are automatically excluded. This saves time and storage space!

Automatic backup of new and changed files

To avoid searching for new or changed files, O&O FileBackup can automatically detect these files for you and propose them for backup. This is especially helpful when importing photos and videos as it immediately creates another copy of this valuable data.

Restoring Backups

Restoring the backup files is as easy as backing them up: just use the built-in restore feature in O&O FileBackup to select the files you want to restore and restore them to the target directory.

Incidentally, you can also restore the data without O&O FileBackup because the data is stored faithfully on the backup medium and can be easily read and copied again direct from there.

O&O FileBackup. Instant. Reliable. Fast.

Instant

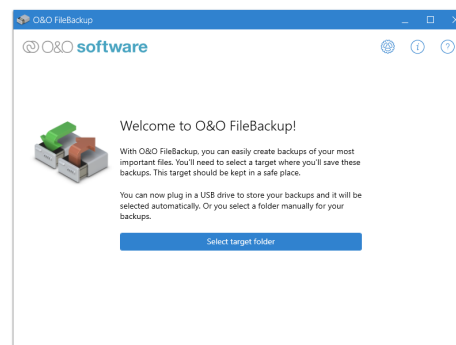

O&O FileBackup can be used immediately. On every Windows PC. Without installation and without equipment. Start, select, save. Finished.

Reliable

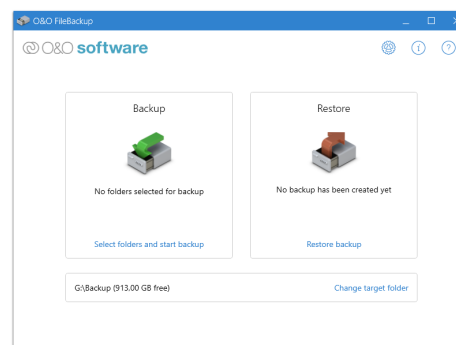

O&O FileBackup detects new and changed files. You need never again look for photos, videos and other documents by hand to copy them. Everything is done automatically.

Fast

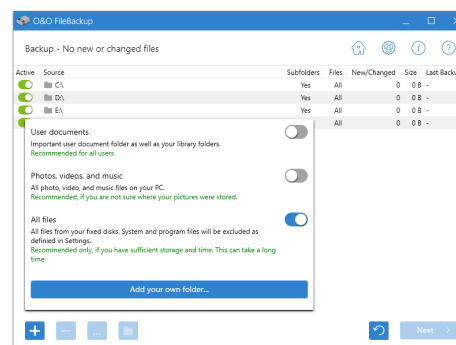

O&O FileBackup backs up your data as fast as is physically possible. Long waiting times for the backup are over. And if you need to save a lot of data, you can pause the backup at any time and continue later. Backups do not get faster or easier than this.

Highlights

- ▶ Assistant-guided backup and restoration of data
- ▶ Support for local backups, backups to USB stick and hard disk / SSD, as well as on target directories available on the network, such as NAS or servers
- ▶ Manual selection of the target directories
- ▶ Automatic selection of directories and file types to be backed up
- ▶ Support of Windows libraries for automatic backup
- ▶ Full and automatic backup of all selected files
- ▶ Automatic detection of new and changed files to add to existing backups (a so-called "incremental" backup)
- ▶ Definition of file filters for backup (e.g. photos, videos, music, office documents)
- ▶ Automatically create an intelligent directory structure so that backups to a destination medium can be made by multiple users on multiple PCs
- ▶ Detailed logging of the backup and restore
- ▶ Definition of exclusion lists, for example to exclude system directories and files during backup
- ▶ Provision for Microsoft OneDrive directories
- ▶ Option to define minimum and maximum file size for the backup
- ▶ Integrated scheduling for automatic backups at defined times
- ▶ Automatic detection and adjustment of the target drive when used on different systems

System Requirements

- ▶ Supports Windows® 10, 8, 7, Windows® Server 2008 R2, 2013, 2016 and 2019
- ▶ No installation required, the application can be started directly
- ▶ Internet connection for product activation and update
- ▶ **Recommended:** external storage medium for data backup, e.g. USB stick or hard disk

Made in Germany. Made in Berlin.

All O&O products are developed and serviced in Berlin. We take the concerns of our customers very seriously because we know just how important their data is for them. What's more, we've been doing so for over twenty years!
