

O&O SafeErase 15

Server Edition

Secure protection against data abuse

The consequences of sensitive corporate data falling into the wrong hands, be it competitors or even the public, might cause serious and lasting damages or even mean the end of your company. O&O SafeErase allows you to permanently delete sensitive data from your server by using approved procedures, so that a reconstruction is no longer possible - even if using special software or a data recovery lab.

Functions

O&O SafeErase affords you the maximum protection for your confidential data, your internet history and your identity. In addition to many smaller adjustments, O&O SafeErase includes an analysis tool that allows you to determine quickly how many safety-critical data exists on your server. With just a few clicks, you can then clean your server, so that unauthorized persons do not have a chance to spy out old files and abuse them. SSDs are also automatically detected and processed conserving resources via SolidErase. The advanced report management and administration of deletion lists for recurring activities now make the use of O&O SafeErase even more convenient.

Secure protection of your company data

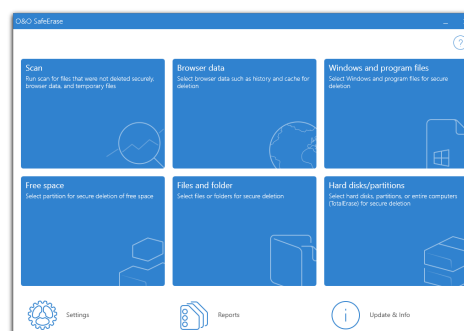

You collect all the internal information, such as customer data, accounting and sales on your company servers. Even accumulated information gathered by regular backups over the years is stored in them. The volume of this data may therefore constitute an unmanageable risk. So please make sure that all data on your disused servers and computers are permanently removed before their disposal or return to a leasing company.

Six methods for your security

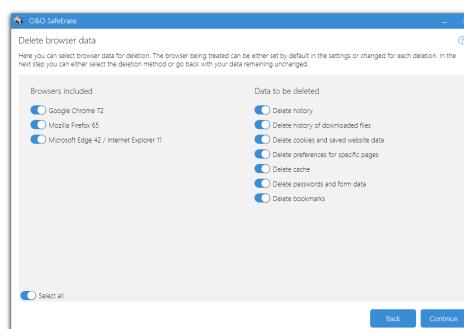

Choose from six different deletion methods depending on your needs. The methods of deletion differ in their number of runs and the overwrite process itself. Besides standardized deletion methods used by the U. S. Department of Defense (DoD) and the Federal Office for Information Security (BSI) you can choose a complex mathematical method (Gutmann-Method), which is in line with the highest security requirements.

Use the command line

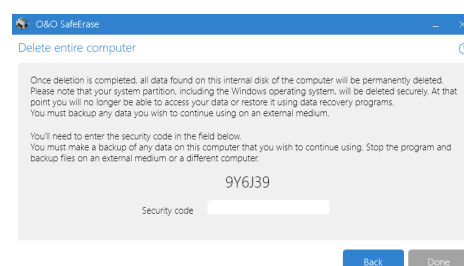

In addition to the clear user interface, you can also use the command line version of O&O SafeErase. You can use it via the Windows command prompt. It is suitable for the integration into scripts, which are supposed to be executed automatically.

Use O&O SafeErase without prior installation

If you want to use O&O SafeErase on multiple computers and servers, we recommend the bootable O&O SafeErase Admin Edition. This is licensed personally to a system administrator and may be used on all computers within the company where this admin possesses the necessary permissions.

In the event you wish to offer secure data deletion as part of your IT services, the bootable O&O SafeErase Tech Edition is just right for you. The Tech Edition is licensed for use as part of a company's external service providing. It is licensed per technician who may then use this license to delete data on an unlimited number of computers.

As a result of the O&O SafeErase Admin Edition and O&O SafeErase Tech Edition bootable media running under Windows PE, there's not even any need for a working Windows environment.

Made in Germany. Made in Berlin.

All O&O products are developed and serviced in Berlin. We take the concerns of our customers very seriously because we know just how important their data is for them. What's more, we've been doing so for over twenty years!

Product features
