

O&O SafeErase 19

Tech Edition

Maximum data security!

In the event you wish to offer secure data deletion as part of your IT services, the bootable O&O SafeErase Tech Edition is just right for you. The Tech Edition is licensed for use as part of a company's external service providing. It is licensed per technician who may then use this license to delete data on an unlimited number of computers.

Fortress Mode

This feature creates a separate Windows environment that operates completely isolated from the main operating system environment. This isolation effectively protects sensitive data from external attacks and malware by providing a secure and controlled environment for data deletion.

Bootable

In O&O SafeErase Admin Edition you can create a bootable media running under Windows PE. This means there's not even any need for a working Windows environment for you to be able to securely delete data, drives and machines.

Internet security

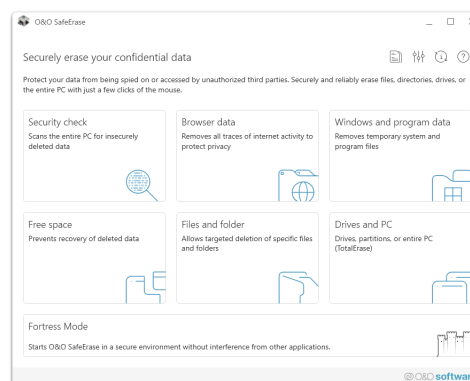

When surfing the Internet, your browser usually stores Internet files on your hard disk unnoticed. These files can provide information about websites you've visited or the passwords you've entered. Makes no difference whether it involves cookies, data entered on forms, or browsing history - O&O SafeErase lists all the information saved for each browser you use, and you can then SafeErase them individually or as a bundle. Once deleted, nobody will be able to detect your Internet activity and your online accounts are protected from unauthorized access.

SafeErasing your entire computer

Deleting the entire computer allows you to permanently remove all data before you dispose of, sell, or give your computer away. All files, settings, applications, and the operating system itself are deleted so that recovery is impossible. You can be sure that nobody will ever restore your data and misuse it. With O&O SafeErase, you can even delete your entire computer without a start medium (e.g. Boot CD).

Six methods for your security

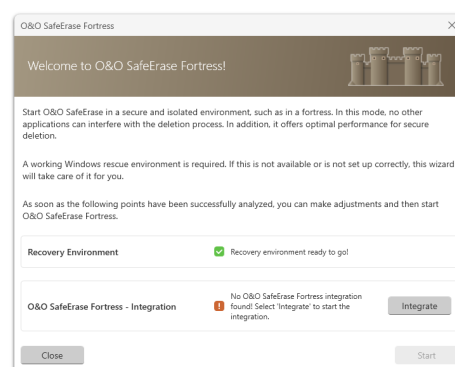

O&O SafeErase allows you to choose from among six different deletion methods. The methods of deletion differ in the number of runs and the type of overwriting process. These methods ensure maximum security, whatever your requirements. In addition to standardized deletion methods of the U. S. Department of Defense (DoD) and the German Federal Office for Information Security (BSI) you can also select a complex mathematical method (Gutmann method), which is en par with the highest security levels. In this scientifically approved method of data deletion, corresponding areas of the hard disk are overwritten 35 times using precisely defined rules along with fixed and random values. In this way, O&O SafeErase exceeds even the requirements of the DoD and the BSI. Quick deletion can also be made by just overwriting data with zeros.
